

Be proactive.

CarbonView™

“By preparing now, business can act on their carbon footprint before government, stakeholders and consumers demand action”

Be proactive.

Providing companies with solutions that enable increased financial performance through enhanced carbon footprint management.

Carbon Data Management: The question we are asked most? How do I start and the devil is in the data detail. CarbonView allows companies to take direct feeds, exact figures from internal or external sources. The data sources come from environmental databases, secured from reliable sources that enable organisations to come up with timely and accurate carbon information. CarbonView provides the mechanisms to structure and manage your carbon and financial data that drives your global business in a centralised platform.

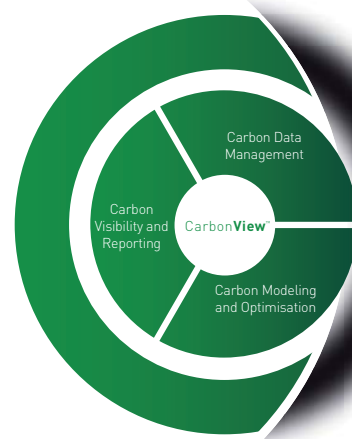

Carbon Modeling and Optimisation: Using proven technologies CarbonView gives you the ability to understand the tradeoffs between carbon footprint and financial performance. Understand what you do where and why, and determine optimal approaches for delivering financially sustainable carbon footprint reductions.

Carbon Visibility and Reporting: Once you know what it is that you need to do the next step is to execute that plan and drive compliance. CarbonView gives you the ability to monitor, alert and report on global business activities from both a carbon and financial perspective. Ultimately, you will gain the ability to manage where your business is creating carbon and track emissions against individual products.

Supply Chain Consulting is a global provider of enterprise software solutions and services. We deliver innovative business software solutions to meet the needs of today's enterprises. Our product portfolio includes SLIM™ qualified SAP solutions, Viewlocity™ supply chain visibility and optimisation software and CarbonView™, the world's leading proactive carbon management solution.

CarbonView provides easy to understand graphical representations of complex underlying carbon and financial data within the context of your global business. As a web based application CarbonView allows you to drill down into location and activity specific information, anywhere, anytime. Where the raw data is just too much, use the inbuilt reporting capabilities to summarise key performance data across executive dashboards, structured reports or simply be alerted to deviations from plan.
